CRC Cards Description

Front-end Modules/Pages:

Class Name: App	
Parent Class: N/A (root class) Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Responsible for conditionally rendering each page on the website.Provides access to the redux store and chakra ui theme to all subclasses.	Collaborators: <ul style="list-style-type: none">src/modules/*src/actions/Auth.jssrc/reducers/rootsrc/components/*

Class Name: LandingPage	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none">The first page that a user sees when loading up StudyTogetherDisplays our logo, description of the app, features, etc.	Collaborators: <ul style="list-style-type: none">src/modules/*src/actions/Auth.jssrc/reducers/root

Class Name: Login	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Handles authenticating usersOn successful login, a JWT token is returned to the client and is stored in a redux store. (optionally saved to localStorage if a user requests to be remembered).	Collaborators: <ul style="list-style-type: none">src/reducers/Auth.jssrc/actions/Auth.jsGreenButton

Class Name: ForgotPassword	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Allows user to send their email to the backend to get an email to reset password 	Collaborators: <ul style="list-style-type: none"> GreenButton

Class Name: ResetPassword	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Reach this page after clicking the link sent from ForgotPassword page Allows user to change password if the link from the email is used 	Collaborators: <ul style="list-style-type: none"> None

Class Name: Groups	
Parent Class: App Subclasses: SecondGroup, Group	
Responsibilities: <ul style="list-style-type: none"> Displays all the groups to the authenticated user It shows all the groups in both the ways for demo 	Collaborators: <ul style="list-style-type: none"> N/A

Class Name: GroupView	
Parent Class: App Subclasses: GreenButton	
Responsibilities: <ul style="list-style-type: none"> Displays a particular group's information to the authenticated user Allows the currently authenticated user to register if there is enough space, leave if the user has already registered to attend that study group, or restricts them from registering if they did not have a chance to register and 	Collaborators: <ul style="list-style-type: none"> N/A

the max capacity has reached.	
-------------------------------	--

Class Name: GroupHistory	
Parent Class: App	
Subclasses: GreenButton	
Responsibilities: <ul style="list-style-type: none"> Displays all the study groups that the currently logged in user has attended in the past 	Collaborators: <ul style="list-style-type: none"> N/A

Class Name: EmailSent	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Let's user know that email to change password is sent 	Collaborators: <ul style="list-style-type: none"> None

Class Name: Register	
Parent Class: None	
Subclasses: GreenButton	
Responsibilities: <ul style="list-style-type: none"> Handles registering users (ie creating new accounts) and subsequently authenticating users on success On successful registration, a JWT token is returned to the client and is stored in a redux store. (optionally saved to localStorage if a user requests to be remembered). 	Collaborators: <ul style="list-style-type: none"> src/reducers/Auth.js src/actions/Auth.js

Class Name: GroupCreator	
Parent Class: App	
Subclasses: Map, GreenButton	
Responsibilities: <ul style="list-style-type: none"> Allows users to create new groups by specifying details about it (ex. Whether or not it is recurring, it's title, current attendee count, etc) User the Map component to allow users to specify a location for the study group. 	Collaborators: <ul style="list-style-type: none"> None

Class Name: GroupEditor	
Parent Class: App Subclasses: Map, GreenButton	
Responsibilities: <ul style="list-style-type: none"> • Allows users to edit the study group information. • Allow users to interact with the map component to pick a new location for the study group. 	Collaborators: <ul style="list-style-type: none"> • N/A

Class Name: AccountInfo	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Allows users to view/edit their account information • Allows users to view other people's account info while restricting them from updating other's account details • Updates localStorage when user changes their name • Displays study groups a user is a part of 	Collaborators: <ul style="list-style-type: none"> • src/reducers/Auth.js • src/actions/Auth.js

Class Name: NotFoundPage	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • A page that is displayed once the user tries to navigate to a url that our front-end doesn't handle. 	Collaborators: <ul style="list-style-type: none"> • N/A

Class Name: About	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • A page that displays the StudyTogether's development team's photos and names. 	Collaborators: <ul style="list-style-type: none"> • N/A

Class Name: CustomCalendar	
Parent Class: App Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Allows users to check the timings of the study groups they are registered for to help schedule and plan their days Allows quick access to study group they are registered for 	Collaborators: <ul style="list-style-type: none"> src/reducers/Auth.js src/actions/Auth.js

Front-end Custom Components:

Class Name: Group	
Parent Class: Any (i.e this is intended to be rendered/used by many classes) Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Displays a group as in the Figma design On click links to the group page Also displays group status 	Collaborators: <ul style="list-style-type: none"> None

Class Name: GreenButton	
Parent Class: Any (i.e this is intended to be rendered/used by many classes) Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A reusable Chakra-ui button with our custom styling and settings 	Collaborators: <ul style="list-style-type: none"> None

Class Name: CustomSpinner	
Parent Class: Any (i.e this is intended to be rendered/used by many classes) Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A reusable Chakra-ui spinner with our custom styling and settings Displayed in multiple places of our app whenever we make a HTTP request to the back-end. 	Collaborators: <ul style="list-style-type: none"> None

Class Name: NotificationBell	
Subclasse: None	
Parent class: Navbar	
Responsibilities: <ul style="list-style-type: none"> • A Notification bell icon that is actually a chakra-ui pop which holds recent activity based on who the user follows and what study groups they are registered in. 	Collaborators: <ul style="list-style-type: none"> • None

Class Name: DetailedGroup	
Parent Class: Any (i.e this is intended to be rendered/used by many classes)	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • Displays a group as in the second Figma design • Display can vary as different sizes are given as props • On click links to the group page • Displays the group's status 	Collaborators: <ul style="list-style-type: none"> • None

Class Name: Map	
Parent Class: Any (i.e this is intended to be rendered/used by many classes)	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> • An interactive google map • Users can click on the map to set markers. 	Collaborators: <ul style="list-style-type: none"> • None

Class Name: MarkerInfoWindow	
Parent Class: Map	
Subclasses: GreenButton	
Responsibilities: <ul style="list-style-type: none"> • Provides information about a study group found on the map • Includes a button that redirects users to the study group's corresponding page when clicked. 	Collaborators: <ul style="list-style-type: none"> • None

Class Name: Navbar	
Parent Class: App Subclasses: NotificationBell, GreenButton	
Responsibilities: <ul style="list-style-type: none"> A component that contains several clickable items that will navigate the user to its corresponding page in the app. 	Collaborators:

BACKEND

Backend - App

Class Name: app.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Holds the main configurations : defined routes, mongoDB client, middleware. Run and build the express server 	Collaborators: <ul style="list-style-type: none"> routes/user.js routes/forgot.js routes/studygroup.js

Backend - Routes

Class Name: routes/user.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Handles user authentication and authorization <ul style="list-style-type: none"> Uses JWT token Update non-sensitive user information 	Collaborators: <ul style="list-style-type: none"> models/user.model.js helper/helperUser.js app.js

Class Name: routes/studygroup.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Handle all CRUD operations for study groups 	Collaborators: <ul style="list-style-type: none"> models/studygroup.models.js helper/helperUser.js helper/helperGroupHistory.js models/studygroupseries.model.js

	<ul style="list-style-type: none"> app.js
--	--

Class Name: routes/forgot.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Recover password in case user forgot it (i.e update old password to a new one) <ul style="list-style-type: none"> Recover process involves tokenization to add a layer of security Sends reset link to the user's email 	Collaborators: <ul style="list-style-type: none"> models/user.model.js models/token.model.js app.js

Backend - helpers

Class Name: helpers/helperUser.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Encapsulates all the helper methods related to the user model. <ul style="list-style-type: none"> verifyToken() respondJWT() 	Collaborators: <ul style="list-style-type: none"> routes/user.js routes/studygroup.js

Class Name: helpers/helperAdmin.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Encapsulates all the helper methods related to admin dashboard 	Collaborators: N/A (comment: this was part of code refactoring, so we are still not using this class)

Class Name: helpers/helperNotification	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Encapsulates all the helper methods related to socket.io event handlers and configuration. 	Collaborators: <ul style="list-style-type: none"> routes/studygroups.js routes/users.js

Class Name: helpers/helperORM.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Encapsulates all the helper methods related to calling any ORM. This is meant to help facilitate a more reusable and scalable code. 	Collaborators: <p>N/A (comment: this was part of code refactoring, so we are still not using this class)</p>

Class Name: helpers/socketStore.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Singleton used to store socket connections. This helps keep connected users separated and identifiable. The goal is to replace this with redis in the future. 	Collaborators: <ul style="list-style-type: none"> helpers/helperNotification.

Class Name: helpers/helperGroupHistory	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> Helps filter out study groups the logged in user has already attended and which still appear as though the user is registered to attend them in the future, and moves them to the appropriate schema field in the database in charge of keeping track of study groups users have attended in the past. 	Collaborators: <ul style="list-style-type: none"> routes/studygroups.js

Backend - ODM

Class Name: models/user.model.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to communicate with the users collections. 	Collaborators: <ul style="list-style-type: none"> routes/user.js routes/studygroup.js routes/forgot.js

Class Name: models/studygroup.model.js	
Parent Class: None Subclasses: None	

Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to communicate with the study group collections. 	Collaborators: <ul style="list-style-type: none"> routes/studygroup.js
--	--

Class Name: models/token.model.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to communicate with the tokens collections. 	Collaborators: <ul style="list-style-type: none"> routes/forgot.js

Class Name: models/studygroupseries.model.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to communicate with the Study-group series collection 	Collaborators: <ul style="list-style-type: none"> routes/studygroup.js

Class Name: models/notification.model.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to communicate with the notification collection 	Collaborators: <ul style="list-style-type: none"> N/A (notification are not persistent in current implementation)

Class Name: models/taverify.model.js	
Parent Class: None	
Subclasses: None	
Responsibilities: <ul style="list-style-type: none"> A mongoose document model (ODM) that is used to request a user be verified as a TA 	Collaborators: <ul style="list-style-type: none"> views/views.js

Backend - Views

Class Name: views/views.js	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Handles all administrative actions (login, approving requests, ban)	Collaborators: <ul style="list-style-type: none">views/index.pugviews/login.pugviews/requests.pugviews/users.pug

Class Name: views/requests.pug	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Creates an HTML render of the admin view ta requests pageAllows admin to accept or reject a user's TA request	Collaborators: <ul style="list-style-type: none">views/views.js

Class Name: views/login.pug	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Creates an HTML render of the admin view login page	Collaborators: <ul style="list-style-type: none">views/views.js

Class Name: views/index.pug	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Creates an HTML render of the admin view home pageAllows admin to select different tabs to view (i.e. users, ta requests etc.)	Collaborators: <ul style="list-style-type: none">views/views.js

Class Name: views/users.pug	
Parent Class: None Subclasses: None	
Responsibilities: <ul style="list-style-type: none">Creates an HTML render of the admin view users pageAllows admin to ban or unban users	Collaborators: <ul style="list-style-type: none">views/views.js

System decomposition

When running the app locally (*we will update this document when we setup a permanent hosting solution for the app*), when the user makes a request to view the web app, the webpack dev server bundles all of the javascript, css, and other assets into one file and sends it to the user. Once the user receives this content, the React code will dynamically render content in the client's browser. As the user interacts with the app, many http requests will need to be sent to the back-end. This is done through axios, a javascript library made for sending http requests. Additionally, the front-end uses the Google Maps API for integrating interactive map components in the app. We use a javascript library called *react-google-maps/api* that handles making requests to google's servers, all we need to do is provide it an API key. The API key for this service is found and configured in the StudyTogether project Google Cloud Platform.

The express framework will handle routing this request to the appropriate class and execute the defined operations, these operations could include user authentication and authorization, create a new study-group, reset password, etc. We also have custom middleware to ensure certain checks are made before the request is processed. We currently have a middleware that verifies JWT tokens embedded in incoming requests. For any operation that involves DB communication, it will use an ODM such as *models/user.model.js* to update stored data as desired. One thing to note is that we are not using a local mongoDB server, but instead a cloud instance through mongoDB Atlas.

In the case where user input is invalid, we incorporate both frontend and backend validation that will ensure no operation is executed with uncertain data, we also log the error. Front-end validation will give the user real time feedback on the issue but making sure not to send anything to the backend until validated. If a request with invalid data does make it to the backend, we make sure to include a validation error handler on every endpoint that will stop executing the request and return the appropriate status code and error message. For any other reason that the request to the back-end may fail (invalid credentials, network failure, etc), the front-end handles it and provides the user with informative feedback on how to resolve the issue they are facing.

We used a three-tier system architecture described here: <https://www.linuxjournal.com/article/3508>
